

PARKER LAKE

Sr. Manager, Data Analysis

Herriman, UT • 385-225-7927 • parkerllake@gmail.com • linkedin.com/in/parkerllake

PROFESSIONAL SUMMARY

Analytics leader with 10+ years of experience connecting marketing performance to business outcomes across telecom, financial services, and automotive industries. Started my career executing paid search campaigns, which gave me a marketer's instincts for how channels truly work, then moved into analytics and have spent the last several years building the measurement infrastructure that helps marketers make better decisions. At Cox Automotive, I built and lead a B2B marketing analytics function from the ground up: standing up the BI platform, owning the data pipelines, establishing KPI governance, and serving as the analytics partner across brand, product, and channel marketing teams. Hands-on technical contributor and people manager who translates complex data into clear insights and solutions that drive action.

PROFESSIONAL EXPERIENCE

Sr. Manager, Data Analysis | Cox Automotive | Draper, UT

Jan 2022 – Present

Promoted from Manager, Data Analysis — Nov 2024

- Built the Retail B2B marketing analytics function from scratch - primary owner and administrator of the Domo BI platform, responsible for data ingestion pipelines, dashboard development, and self-service reporting infrastructure serving multiple brands and marketing teams.
- Designed and implemented a UTM governance and data attribution framework across 6+ business units, solving a fragmented attribution problem where disparate naming made it impossible to aggregate and trust cross-channel performance data.
- Integrated 15+ data sources into a unified Domo environment, more than doubling the performance metrics available to stakeholders and enabling comprehensive campaign measurement that previously didn't exist.
- Lead enterprise-wide analytics for the annual NADA conference across 4 consecutive years. Shifted measurement focus to account-based KPIs including registrations, attendance, and list penetration rates, enabling year-over-year strategy improvements grounded in meaningful signals rather than vanity metrics.
- Built tools for identity resolution, audience list building, and marketing forecasting, adding capabilities the team did not have previously, enabling more precise targeting and forward-looking planning.
- Serve as the primary analytics partner for brand, product, channel, and strategy marketing teams, translating data needs into actionable insights and owning the analytics roadmap across a multi-brand B2B portfolio.
- Actively partnering on Snowflake migration, contributing data modeling and pipeline logic as the team transitions from Domo-native ingestion toward a cloud data warehouse architecture in Snowflake.
- Integrated AI-assisted automation workflows into reporting and day to day analytics work to help deliver more effective and custom data solutions and accelerate our output as a team.
- Grew team from 0 to 2 direct reports while maintaining hands-on technical ownership of the platform. Expanded coverage from 3 brands to 6+ brands and 70+ stakeholders in the span of 3 years with a small team.

Sr. Business Analyst | Clearlink | Salt Lake City, UT

Mar 2019 – Nov 2021

- Built analytics infrastructure from the ground up for multiple new digital sales channels including online cart, SMS chat, lead form submissions, and email. Developed core foundational tables for reporting in Redshift by writing SQL and deploying data pipeline orchestration in AWS.
- Partnered on a full-funnel customer journey data model that stitched together web clickstream, CRM/lead, and call center telephony data, creating end-to-end visibility into how customers moved from digital touchpoint to conversion across both online and call-center paths.
- Led the buildout of Looker as the marketing division's BI platform, delivering self-service dashboards that reduced ad hoc reporting requests and put performance data directly in the hands of marketing stakeholders.

- Designed and ran A/B tests to establish baseline conversion metrics for the online cart channel, providing the data foundation needed to grow it from a new initiative into a meaningful revenue contributor.

Data Scientist / Analyst | CardWorks | South Jordan, UT

Jun 2017 – Mar 2019

- Automated credit card collections workflows in SAS, reducing manual processing time and improving operational consistency across account management.
- Developed performance monitoring and ad hoc reporting solutions to support collections strategy and credit decision-making.

Paid Search Specialist / Analyst | Clearlink | Salt Lake City, UT

Aug 2015 – Jun 2017

- Managed and optimized PPC accounts across national telecom brand partners - hands-on campaign experience that directly shaped how I approach marketing measurement and channel analytics.
- Reduced costs 40% while improving click-through rate on the second-largest brand; grew sales call volume by 50%+ on another account through bid management and ad copy testing.

EDUCATION

M.S., Business Analytics | University of Utah

2017

Predictive Analytics, Data Mining, Data Visualization, Statistics, SQL, R

B.S., Marketing | University of Utah

2016

Marketing Research, Marketing Analytics, Marketing Management
